EDUCATION

Full Stack Web Development

Masai School, Bangalore
March 2022 - December 2022

Bachelor of Technology (EIE)

Galgotias College, Greater Noida
August 2014 - June 2018

Higher Secondary (Science)

V.P.M. Vidyalaya, Uttar Pradesh
June 2011-May 2013

SKILLS

Technical Skills

- Core Java | Spring Boot | Spring security
- Maven | Hibernate with JPA
- RESTful Web Services | MySQL
- Thymeleaf | HTML | CSS | JavaScript
- Data Structure and Algorithms

Soft Skills

- Time Management
- Adaptability
- Teamwork
- Problem solving

ACHIEVEMENTS

- Two times **Gate qualified** in 2020,2021 respectively.
- Silver badge in **Java** and **SQL** in **HackerRank**.

INTERESTS

Sketching | Gardening | Travelling

PROJECTS

Contact Management System

Links - 🔗

This is a Contact Management System built using Spring Boot and Thymeleaf. The purpose of this system is to allow users to manage their contacts by storing and retrieving their information.

Features:

- Designed and developed a contact management system using Spring Boot for the backend and Thymeleaf for the front end.
- Implemented login and logout features with Spring Security for authentication and client-server validation to ensure secure access to the application.
- Created a user-friendly interface to allow users to add new contacts, update existing contacts, and delete contacts as needed.
- Implemented a password change feature to allow users to update their login credentials from within the application's settings.
- Integrated a payment gateway from Razorpay to enable users to donate money to the cause.

Tech Stack:

- Core Java | Hibernate with JPA | Spring Boot | Restful APIs | MySQL
- Thymeleaf | HTML | CSS | JavaScript | Bootstrap
- Payment Gateway API of Razorpay | GitHub

ShopEasy | E-commerce Application

Links - 🔗 📺

E-commerce Application that is used for the buying and selling of products. This application can be used by various buyers and sellers to buy or sell products.

Features:

- Authentication and validation for customer and admin using the session UUID
- logged-in admin with active session tokens can add, update, or delete customers, products, and orders from the primary database
- On the platform, a customer can register and update their details
- Customers can add the product to the cart. after adding the product to a cart, customers can buy a product

Tech Stack:

- core Java | Hibernate with JPA | Spring Boot
- Restful APIs | Swagger | MySQL
- Lombok | Postman | GitHub

Cab Booking Application

Links - 🔗 📺

The goal of an online cab booking system is to bring riders and drivers together on one platform. The online cab booking system makes traveling easier in this digital age by allowing you to move from one location to another with a single tap.

Features:

- Authentication and validation for customer and driver using the session UUID
- logged-in drivers with active session tokens can add, update, or delete driver details and cab details, update status online to offline vice versa
- On the platform, a customer can register and update their details
- Customers can book trips, or cancel trips. after the trip can make payments, customers can see previously completed trips

Tech Stack:

- core Java | Hibernate with JPA | Spring Boot
- Restful APIs | Swagger | MySQL
- Lombok | Postman | GitHub
